SUMMARY

MERN stack developer with 1+ year building a production fintech platform: MongoDB schemas, Express/Node.js REST APIs, and React.js/TypeScript interfaces. Currently migrating a CRM/LMS from Angular 9 to React 18 and independently own a chat application's redesign, performance work, and Twilio-integrated maintenance. Fixed a WebSocket re-render bottleneck with React Query caching and a stateless persistence pattern, taking the module to roughly 1M concurrent chat records without lag. Built JWT-based authentication and role-based access control across the platform's auth layer.

SKILLS

Frontend: React.js, TypeScript, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS, shadcn/ui, MUI, React Query, Zustand, Responsive Design

Backend: Node.js, Express.js, REST API Design, JWT Authentication, OAuth, Role-Based Access Control (RBAC), Redis

Database: MongoDB, PostgreSQL

Tools & Practices: Git, GitHub, Postman, Agile/Scrum, Husky/CI pre-deploy checks, Debugging, Input Validation, Error Handling, Technical Documentation

AI-Assisted Development: Prompt Engineering, AI-assisted coding & debugging workflows (Claude, GitHub Copilot) for faster iteration and code review

WORK EXPERIENCE

Junior Software Engineer, Full-Stack — Statlight Software Solutions *Jun 2025 – Present*

- Leading the migration of the company's CRM/LMS platform from Angular 9 to React 18.
- Solo-own the chat application's redesign, performance optimization, testing, and ongoing maintenance, including a Twilio-based communication component.
- Diagnosed and fixed a major WebSocket chat performance issue by redesigning re-render logic and introducing React Query caching; built a stateless persistence pattern supporting roughly 1M concurrent chat records without prior lag.
- Built React.js/TypeScript UI components for dashboards, forms, and workflow screens across the loan management product, including a canvas-style template editor for internal documents.
- Built and maintained Node.js/Express APIs and MongoDB/Mongoose schemas for authentication, role-based access, workflow records, and application data.
- Set up pre-deployment verification checks and Husky commit hooks to block low-quality commits before merge; contributing to a broader CI/CD pipeline in progress.

Technical Trainer & Freelance Developer — a1ideaz *Oct 2024 – Feb 2025*

- Trained students in JavaScript and full-stack fundamentals (CRUD apps, auth flows, REST APIs) and took on freelance development for external B2B clients.

PROJECTS

html-formeditor (Open Source) — React.js, TypeScript, shadcn/ui, Tailwind CSS *Mar 2026 – Apr 2026*

- Built a canvas-style visual editor from scratch for creating and managing company documents and email templates, removing third-party dependencies and giving the team full layout control.
- Implemented HTML import/export engines so users can visually edit templates and export production-ready HTML.

AccessVault — Role-Based Credential Management — React.js, Node.js, Express.js, MongoDB, JWT *Dec 2025 – Feb 2026*

- Built a role-based credential management app (Admin/Manager/Viewer) with JWT auth, bcrypt hashing, validated MongoDB schemas, and audit logging for access and modification history. For my personal usage i'm using this app for storing env files and my credential files on that app

CERTIFICATIONS

- AWS Cloud Practitioner — In Progress (Udemy)
- AWS Fundamentals — Completed (College)
- Responsive Web Design — freeCodeCamp

EDUCATION

B.E., Computer Science and Engineering — E.G.S. Pillay Engineering College, Nagapattinam*Oct 2020 – Jun 2024*
GPA: 8.0 / 10
