Junior Software Engineer with around 1 year of experience developing business web applications using React.js, TypeScript, Node.js, Express.js, and MongoDB. Worked on loan management software, LMS frontend modules, and a multi-tenant chat module involving session handling, UI flows, API integration, and role-based access. Comfortable building data-driven screens, reusable UI components, REST API integrations, form workflows, and debugging frontend-backend issues in product environments.

SKILLS

Frontend: React.js, TypeScript, JavaScript ES6+, HTML5, CSS3, Tailwind CSS, shadcn/ui, Responsive Design,MUI , React Query,zustand

Backend: Node.js, Express.js, REST API Development, JWT Authentication, Role-Based Access Control,Redis,

Database: MongoDB,Postgres

Tools & Workflow: Git, GitHub, Postman, VS Code, Chrome DevTools,codex,ai studio , google sitch

Practices: Documentation , API Integration, input Validation, Error Handling, Debugging, Reusable Components, server and frontend telemetry

WORK EXPERIENCE

Junior Software Engineer

Jun 2025 - Present

Statlight Software Solutions

Statlight Software Solutions

- Develop and maintain frontend and full-stack modules for business web applications, including loan management screens, LMS frontend work, and internal chat module features.
- Build React.js and TypeScript UI components for dashboards, forms, workflow screens, and user-facing business modules.
- Work on multi-tenant chat module features involving session handling, UI flows, and frontend-backend integration.
- Integrate REST APIs using React Query for data fetching, loading states, error states, and form submission workflows.
- Build and update Node.js, Express.js APIs and MongoDB/Mongoose schemas for authentication, role-based access, workflow records, logs, and application data.
- Debug issues related to API responses, form validation, data rendering, authentication, and role-based user flows

Apprenticeship

Oct 2025 - Feb 2026

a1ideaz

Mayiladuthurai, India

- Trained students in JavaScript, Java, Python, and full-stack development fundamentals with a focus on practical coding sessions.
- Guided learners in building CRUD applications, authentication flows, REST API basics, and database-connected projects.

EDUCATION

Bachelor of Engineering - Computer Science and Engineering

Oct 2020 - Jun 2024

E.G.S. Pillay Engineering College, Nagapattinam

GPA: 8.0/10

PROJECTS

html-formeditor [opensrc]

Mar 2026 - Apr 2026

- techstack - [React.js, shadcn, tailwind , typescript]
- Built a custom, canvas-style visual editor** from scratch to create and manage official company documents and email templates.
- Eliminated third-party package dependencies** by engineering an in-house visual builder, giving the production team complete layout and design control.
- Implemented seamless HTML import and export engines**, allowing users to visually modify templates and export raw, production-ready HTML layouts.
- Designed an intuitive drag-and-drop canvas interface** leveraging **shadcn/ui** components and **Tailwind CSS** for an optimized, responsive user experience.
- Ensured strict type safety and code reliability** across the entire editing workflow by architecting the application fully in **TypeScript**.
- this overcome stress frontend no need wrong about any external package they can maintain and upgrade them to make it proper by themselves this editor

AccessVault - Role-Based Credential Management System

Dec 2025 - Feb 2026

- techstack - [React.js, Node.js, Express.js, MongoDB, JWT, bcrypt]
- Built a credential management application with role-based access for Admin, Manager, and Viewer users.
- Implemented JWT authentication and bcrypt password hashing for protected login and access control.
- Created REST APIs for managing credentials, users, roles, and access permissions.
- Designed MongoDB schemas with validation for users, credentials, roles, and audit logs.
- Added audit logging to track credential access, updates, and modification history
